TIMELINE

WEEK 1 –

GOAL: Make sure the primary function of this program ACTUALLY WORKS, with the ability to send alerts every day when it's time to shred some former patient's old file and records.

Mon., 5/19: Work on the "daily update" function, with a pre-made list of fake "patient profiles" for data
Tues., 5/20: Keep working on the "daily update" function, and make sure that it gives the user the necessary reminder to safely destroy the physical records, as well as move the former patient's data from the "Active" list to the "Inactive" list
Wed., 5/21: Work on the separate program which goes along with the main program, as to not drag down the latter
Thurs., 5/22: Troubleshooting

WEEK 2 –

GOAL: Get closer to the end result with full functionality.

Mon., 5/26: Add the ability to add new names and profiles and data into the program, to replace the old ones now gone
Tues., 5/37: Make sure the "Active" list and the "Inactive" list are both working correctly
Wed., 5/28: Troubleshooting, and explore the possibility of other options in the future
Thurs., 5/29: Troubleshooting

WEEK 3 –

GOAL: Have my project fully functioning and ready to go!

Mon., 6/2: Create a more user-friendly GUI
Tues., 6/3: Troubleshooting
Wed., 6/4: More troubleshooting
Thurs., 6/5: Even more troubleshooting
